

ANUPAM BHOWMICK

Staff Product Designer · 9+ years building enterprise platforms, design systems and AI workflows

anupambhowmick123@gmail.com · +91 98408 98752 · Bengaluru, India

Portfolio: anupambhowmick.in · LinkedIn: linkedin.com/in/anupambhowmick

SUMMARY

- Staff level designer with 9 years of experience designing enterprise B2B platforms and leading the design function.
- I build design systems tailored for both human teams and AI models.
- I create AI-native workflows that accelerate design-engineering collaboration and speed to market.
- I use AI to extend design thinking into production-ready code, bypassing handoff bottlenecks to ship features directly.

EXPERIENCE

Xoxoday · Senior Product Designer (Staff/Lead scope)

January 2019 – Present · Bengaluru

Lead designer for the core rewarding platform and rewards marketplace serving 4,000+ enterprise clients globally. Managing the organizational design system and scaling the design function.

Design Leadership

- Served as the lead design voice, advocating for users and aligning platform and roadmap decisions directly with founders and cross-functional teams before scoping.
- Scaled and managed the design team as the function grew across product and marketing from 2 to 15 designers through hiring, mentorship, and training.
- Led design team operations, managing Figma administration, establishing cross-functional workflows, running design critiques, and embedding design into sprint planning to make the function more efficient.

Design Systems

- Built Xoxoday's design system from scratch and scaled it from a small product library into an org-wide system as the design team grew from 2 to 15 designers.
- Defined the foundations, token architecture, accessibility standards, and core components used across product and marketing teams.
- Governed what entered, evolved, or was retired from the system, aligning designers and engineers around a shared design language.
- Unified product-specific libraries into one org-wide system and drove adoption across the organization.
- Reduced UI duplication and improved design consistency to ~90% across products.

AI Native Workflows

- Made the org design system AI-readable enabling teams to generate production pages without manual coding, cutting duplicate frontend effort by ~40% and reducing engineering time by 25%.
- Worked closely with engineering to validate code quality using the design system and drove adoption across teams through workshops, documentation, and review.
- Designed directly in the codebase using AI coding agents, raising pull requests to ship features faster and bypass traditional handoffs.
- Integrated AI tools to streamline research, copy, testing, and brand workflows, including building an AI-readable brand system for marketing assets.

Admin Platform

- Redesigned reward distribution for thousands of recipients across reward types, countries, and delivery methods, improving the experience for 4,000+ enterprise clients across 150 countries.
- Simplified the experience to set up reward campaigns and branded storefront, including white-labeling, personalization, and catalogue selection across 10M+ options, cutting launch time and support dependency.
- Structured reward, redemption, and order data into scalable reports, tables, and dashboards, reducing the time admins spent finding and interpreting data.
- Redesigned payments and financial workflows for managing transactions across multiple accounts and currencies, reducing finance-team support dependency by ~25–35%.
- Structured admin settings, access management, security controls, and onboarding experiences. Enabled self-serve roles and permission management and rebuilt onboarding, cutting drop-offs by ~70% and improving activation by ~12%.

Reward Marketplace

- Redesigned the reward discovery experience across navigation, search, filters, and product pages for a catalogue of 10M+ options, making it easier to find and evaluate rewards.
- Defined how physical products, digital gift cards, payouts, and travel worked within one marketplace, and built repeatable frameworks for new category and seasonal launches, reducing go-to-market time.
- Simplified the end-to-end redemption experience across multi-category carts, checkout, and order management, reducing support issues related to redemption and orders.

Gapoon (now DusMinute) · UX UI Designer

June 2017 – December 2018 · Bengaluru

Home services marketplace for on demand home maintenance and repairs. Designed end to end user flows, interaction patterns, and UI systems across the customer, vendor, and admin platforms, on both web and mobile, covering the full product from discovery and booking through to job completion and payments.

Algebra Analytics · UX UI Design Intern

March 2017 – June 2017 · Bengaluru

Restaurant tech platform for analytics and operations management. Designed the entire product experience for the tool, used by restaurant managers and owners.

SKILLS

Design & Research: UX UI, Wireframing, Prototyping, Interaction Design, Visual Design, Accessibility(WCAG Compliance), Information Architecture, Design and Product Thinking, Usability and User Testing, UX Copy, Data Informed Design, Qualitative & Quantitative Research

Systems & AI: Design Systems, Token Architecture, Design Engineering, AI Native Workflows, Generative and Agentic AI, Design to Code, Systems Thinking

Leadership & Domain: People Management, Hiring & Mentorship, Design Operations, Cross Functional Management, Stakeholder Alignment, Enterprise B2B SaaS, Storefront Configuration, Rewards and Incentives, Agile

TOOLS

Figma, Claude Code, Claude, GitHub, VS Code, Hotjar, Maze, ChatGPT

EDUCATION

BE, Electronics and Instrumentation Engineering, Sathyabama University, Chennai, 2011 to 2015
